

NYRWOOD HOUSE RULES

A Campaign Setting Supplement for the DCC RPG Magic & Triage Systems

CAMPAIGN DOCUMENTATION METADATA

Revision Date: June 1, 2026

Author: Todd Bradley with editing help from Gemini.

Playtest Status: **CURRENTLY ACTIVE PLAYTESTING PHASE** — These rules are currently being playtested and are subject to development adjustments based on campaign feedback.

Spell names and other game basics are from the "Dungeon Crawl Classics Role Playing Game" by Joseph Goodman and Others.

1. INTRODUCTION

This document establishes the official "house rules" for the Nyrwood DCC RPG campaign. Unless explicitly modified herein, all standard mechanics are governed by the *DCC RPG Core Rules*. References to page numbers formatted as "(p. 130)" directly refer to the Core Rules tome.

2. MAJOR CHANGES TO MAGIC

This section outlines structural changes enacted on the magic and spellcasting frameworks to better adapt the campaign to its setting constraints.

Bye Bye Clerics

Clerics are no longer a playable character class. In this setting, divine power acts directly through the interventions of the gods themselves, rather than being channeled through specialized mortal player conduits. While priests, cultists, and ministers exist as background occupations, they remain exclusively Non-Player Characters (NPCs). This shift is a deliberate structural attempt to realign the system with the gritty tradition of "Appendix N" fantasy fiction. The classic pulp fantasy novels of the 20th century feature iconic examples of wizards, warriors, thieves, and bizarre demi-humans, but rarely include a designated front-line battle-medic or combat cleric. Eliminating them from the roster shifts the tactical dynamic of the game significantly.

To fill the structural void left by the cleric class, players have access to a new playable class: the **Druid**. Mechanically, Druids leverage most of the Cleric rules from the core book, but they channel their magic from the primordial forces of nature rather than a singular deity. Druids are almost universally Neutral in alignment (reproducing the alignment strictures found in classic D&D). A notable structural exception to this rule is "The Old Man" from the *Seventh Thrall of Sezrekan* adventure modules.

Schools of Magic

In accordance with Joseph Goodman's editorial encouragement found on page 320 of the Core Rules, this campaign formally organizes arcane energy into distinct **Schools of Magic**. In the Nyrwood setting, magic is categorized into five recognized schools: **Healing Magic**, **Elemental Magic**, **Eldritch Magic (Black Magic)**, **Enchantment Magic (White Magic)**, and **Nature Magic**.

The first four schools are restricted entirely to Wizards. The fifth school, Nature Magic, is the exclusive domain of the Druid class. There are no "Wizards of Nature" in this universe, as wizardry is understood to be an innately unnatural distortion of cosmic reality. In this campaign framework, a "school" represents an esoteric school of thought or an analytical approach to spellcasting rather than an institutional academy or physical learning center. Wizards specializing in different disciplines may debate the phlogistonian variances across categories, but the intricacies of these classification methods remain completely opaque to non-wizards.

School	Class Restriction	Primary Focus & Themes
Healing	Wizard (Specialization)	Restoration, biological protection, and vitalization.
Elemental	Wizard (Specialization)	Mastery over the physical forces and structures of nature.
Eldritch	Wizard (Black Magic)	Ancient secrets, entity summoning, and dark entropic energies.
Enchantment	Wizard (White Magic)	Manipulation of the mind, sensory illusions, and subtle influence.
Nature	Druid (Exclusive)	The neutral balance, flora, fauna, and cycles of the natural world.

3. THE NEW NATURE OF HEALING

Without a dedicated Cleric in the party roster, surviving lethal dungeons requires a fundamental shift in perspective. Medical treatment becomes significantly costlier, slower, and often bound to dangerous cosmic bargains. In classical pulp fiction, heroes like Conan do not venture into crypts alongside combat medics; minor injuries are slept off over a night of rest, while severe traumas force them to hole up inside exotic strongholds for weeks at a time.

Ways to Restore Hit Points

Under the standard rules as written (RAW) of the DCC RPG, characters primarily heal through three methods: the Cleric's *Lay on Hands* ability or restorative spells (such as *Cure Paralysis* or *Restore Vitality*), natural sleep (recovering 1 HP per night or 2 HP for a full day and night), or magical items and potions. Under these house rules, the healing toolkit is expanded but highly regulated:

1. **Druidic Arts:** Druids can utilize the *Lay on Hands* mechanic and cast restorative spells directly from the standard Cleric spell list as outlined in their specific school.
2. **Sleep It Off:** Natural rest is significantly amplified compared to the core rules. Characters now recover hit points equal to $1 + STA + (CL / 2)$ (rounded up) per night of standard rest, or $2 + STA + CL$ for a full day and night of complete immobility. This links biological recovery directly to overall health and character power, meaning veteran characters rebuild their physical reservoirs faster.
3. **Magical Artifacts:** Occasional magic items, specialized potions, and artifacts function exactly as described in the core rules.
4. **Mundane Healing:** Characters can seek out or train in expert occupations (Alchemists, Herbalists, or Healers) to administer practical medicine, prepare non-magical compounds, or perform surgeries. These detailed options are expanded in the sections below.
5. **Patron Intervention:** Wizards bound to extraplanar patrons can utilize the *Invoke Patron* spell to beseech cosmic forces for physical restoration. This can yield massive spikes of healing but comes at a steep price, always requiring a minimum sacrifice of 1 point of permanent or temporary Spellburn.
6. **The Healing School:** Arcane practitioners who specialize as Wizards of Healing Magic gain explicit access to traditional clerical restoration formulae.
7. **Divine Intercession:** A character can pray under the spiritual guidance of an ordained NPC priest. Any recovery achieved this way represents a direct, miraculous act of the god rather than a player-driven spell. Because priests are peaceful citizens rather than adventurers, they are treated as Level 0 NPCs with 1d4 Hit Points, remaining safe within their home temples.

Healing Oriented Occupations

Characters possessing relevant background skills can provide crucial aid during rest intervals:

- **Alchemist:** Proficient in gathering and identifying obscure alchemical materials ("eye of newt" and rare mineral deposits) to distill basic tonics or combine poultices that stabilize or restore raw physical vitality.
- **Dwarven Apothecarist:** Specializes in subterranean mineral salves, deep wound packing, and fortifying elixirs designed specifically to counteract underground toxins, venomous bites, and severe deep-tissue crushing.

- **Healer:** The traditional backbone of secular medicine. Trained to staunch severe bleeding, clean and suture open slashes, set fractured bones, and provide palliative comfort that grants patients the mechanical benefit of rest without requiring complete immobility.
- **Herbalist:** Possesses comprehensive expertise in regional flora. Able to harvest and boil curative roots, leaves, and barks into fast-acting tinctures that accelerate natural recovery or eliminate non-magical sickness.

Mundane Triage & Apothecary Rules

Any player character with the background occupation of Alchemist, Herbalist, or Healer can dedicate downtime or rest intervals to executing non-magical treatments. These procedures rely entirely on secular expertise rather than cosmic spellcraft, requiring a standard **Occupational Skill Check (d20 + Intelligence Modifier)** against the designated Difficulty Class (DC) of the specific compound, herb, or surgery.

1. The Alchemist: Chemical Synthesis

Alchemists mix stable minerals, reactive acids, and concentrated elemental extracts to engineer restorative or stimulating battlefield compounds. Synthesizing an item requires **1 hour of uninterrupted downtime**, access to a functional **Alchemy Kit**, and a raw silver or gold cost representing hazardous chemical reagents and specialized glassware.

DC	Compound Name	Reagent Cost	Combat & Wound Remedy Effect
10	Oil of Vigor	5 silver pieces	Wound Sealer: Can be rapidly smeared over a dying character's mortal injuries. Instantly stabilizes the patient, bypassing the need for an ally to roll a standard "Turn Over the Body" Luck check.
15	Cauterizing Salts	1 gold piece	Tissue Welder: Heals 1 point of physical damage immediately upon application. Additionally, if applied to a target who has suffered a Critical Hit, it instantly halts any ongoing bleeding metrics or physical attribute penalties imposed by that specific critical injury.
20	Phlogistonic Salts	3 gold pieces	Smelling Salts: Snapped directly under the nose of an unconscious, dying, or paralyzed character. The sudden, violent cellular shock forces the recipient to instantly stand up, regain 1d3 temporary Hit Points, and act normally on the very next combat round.

2. The Herbalist: Wilderness Foraging

Herbalists navigate the organic bounty of the wilderness to grind fast-acting poultices and boil metabolic tonics. Gathering active roots and flora requires **1 hour of active foraging** within an appropriate wilderness ecosystem. Because these remedies rely on raw, unpreserved biological matter, all herbal compounds rapidly decompose, completely losing their medical potency and spoiling after exactly **2 days (48 hours)**.

DC	Remedy Name	Environment	Combat & Wound Remedy Effect
10	Soothe-Sap Paste	Any Wilds / Rural	Bruise Relief: A sticky, pungent resin mash that dulls localized trauma and deep, throbbing tissue pain. Restores 1d3 Hit Points to a wounded living character.
15	Dream-Root Infusion	Forests / Mountains	Metabolic Accelerator: Shredded roots boiled into a bitter evening tea. The recipient enters a profound, deep, and heavily restorative state of sleep. Upon completing a standard overnight rest, the character doubles their natural healing recovery (recovering 2 HP per character level instead of the standard 1 HP).
20	King's-Weed Extract	Mountains / Caves	Antidote Mash: A highly concentrated paste that clears basic organic impurities. Restores 1d6 Hit Points to a character. Alternatively, if pressed into a wound within 3 rounds of a poison injection or venomous bite, it grants the victim an immediate, reactive reroll on their Fortitude saving throw.

3. The Healer: Practical Barber-Surgery & Triage

Healers bypass laboratory gear and wilderness foraging entirely. Armed with bone saws, cauterizing irons, curved needles, and sterile gut-thread, they manually force a ruined body back into structural alignment. Executing an aggressive medical procedure requires **1 hour of intense, physically agonizing work** and a fully stocked **Healer's Kit**.

DC	Treatment Name	Requirements	Combat & Wound Remedy Effect
10	Field Stitching	Needle & Gut-Thread (1 sp)	Sew Up Cuts: The healer needles a gaping slash shut without anesthesia. Instantly binds the flesh and restores 1d4 Hit Points to a conscious, wounded character.
15	Iron Cauterization	Campfire & Iron Blade	Cauterize Wounds: The healer presses a red-hot iron implement directly into a mortal, open wound. This violently stabilizes a dying character and drags them back to full consciousness with exactly 1 Hit Point. The patient is left permanently and distinctively scarred.
20	Kinetic Bone-Setting	Wooden Splints & Rags	Accelerate Healing: The healer brutally snaps splintered bones back into structural alignment and massages blood flow into crushed tissue. The patient immediately rolls and recovers 1 full class Hit Die (HD) of hit points on the spot. The patient must sit entirely still during the hour required to perform this agonizing manipulation.

Universal Rule: The Diminishing Returns Save

A mortal body can only withstand a limited threshold of physical packing, metal branding, and chemical alteration before its biological systems become overtaxed and begin to violently reject medical treatment.

- **The Safe Threshold:** A character can safely benefit from exactly **one Alchemical Compound, one Herbal Remedy, and one Healer Surgery Treatment per game day** with guaranteed mechanical success.

- **Pushing the Limit:** For any subsequent mundane medical application of any type attempted on that same character within the same game day (such as a second alchemical poultice, an additional surgical stitching, etc.), the patient's constitution threatens to reject the care. The recipient must immediately roll a **Fortitude Saving Throw**.
- **The Difficulty Class:** The base save begins at **DC 13**. The DC automatically scales up by **+3** for each individual dose or treatment successfully absorbed past the safe threshold on that day.

Save Outcomes & Consequences:

- **Success:** The patient's system successfully internalizes the treatment. The compound or procedure yields its full mechanical effect and healing as standard.
- **Failure:** The body violently rejects the care (stitches split open under physical stress, or the compound triggers a fit of severe cold sweats and vomiting). The treatment is completely wasted, provides zero mechanical benefit, and that specific category of medicine (Alchemy, Herb, or Surgery) cannot be attempted on that patient again until they complete a full night's rest.

4. DEITIES AND DEMIGODS

The role of religion, divinity, and cosmic alignments in the house rule universe is governed by three operational principles:

- **Direct Action:** Gods govern the operational variables of the world directly. Priests act as guides, philosophers, and historical intercessors, never as personalized magical conduits.
- **Luck:** Luck points represent a direct, tangible gift from the gods. This resource is directly influenced by a character's strict adherence to or betrayal of their chosen cosmic alignment.
- **Religious Diversity:** Structural religious layouts vary across regions, promoting singular local deities, rigid monotheistic dogmas, or vast pantheistic collectives.

5. CATEGORIZED SCHOOLS OF MAGIC

This section outlines the comprehensive tables of spells available to practitioners of each respective school of thought. Most spells are shared across multiple disciplines. These explicit listings override the default "Kinds of Magic" section found on page 106 of the Core Rules.

Guide to Table Notations (Asterisks):

The asterisks appearing on specific spell names mirror their functional usage within the core rules framework:

- **Single Asterisk (*):** Indicates that the spell possesses cross-class utility or baseline mechanical alterations from its standard casting rules. For instance, **Detect Magic** or **Detect Evil** traditionally cross over between Clerical and Wizard listings in the source tables.
- **Double Asterisk (**):** Denotes spells inextricably bound to extraplanar Patrons and corresponding Spellburn requirements (such as **Invoke Patron** or **Patron Bond**), requiring dedicated physical sacrifice to initiate.

Healing Spells

These spells are available to Wizards specializing in the Healing School of Magic. *Note: Custom campaign spells are highlighted below.*

Level	Original Class	Spell Name	Core Page
1	Cler	Blessing	255
1	Wiz	Cantrip	130
1	Wiz	Charm person	131
1	Wiz	Chill touch	133
1	Wiz	Comprehend languages	136

5	Wiz	Magic bulwark	251
5	Wiz	Mind purge	252

FEATURED CUSTOM SPELL: PHLOGISTONIC BIO-WELDING

Level 1 Wizard Spell | Healing School Specialization

Range: Touch (Self or Other)

Duration: Instantaneous

Casting Time: 1 Action

Save: None

General Description: The wizard directly manipulates the luminous, semi-fluid elemental ether known as phlogiston—the volatile, primordial life-fluid of cosmic heat. Channels of raw ether are aggressively injected into a broken, bleeding, or physically compromised living organism. Exposed flesh meltingly fuses together like hot tallow, splintered bones snap violently back into mechanical alignment with audible wet pops and crackling bursts of kinetic sparks, and collapsed internal organs re-inflate like over-pressurized leather bellows.

All hit points recovered via this spell are determined by rolling the recipient's standard class **Hit Dice (HD)**, including their Stamina modifier as normal (minimum 1 point per die). If an effect grants healing over time during rest, these additional Hit Dice are rolled when the rest condition is met.

Targeting Dynamics: Self vs. Other

Wielding a high-pressure plasma stream changes the experiential reality of the magic entirely based on who is on the receiving end of the torch:

- **Casting on Others:** The wizard acts as an external biological mechanic, holding the arc away from their own body. The procedure is violently loud and smells of scorched hair, but the caster remains completely insulated from the physical sensory feedback loop.
- **Casting on Self:** The wizard connects the live etheric line directly into their own somatic circuit. Enduring the deeply surreal, highly disturbing theater of watching their own skin bubble, hiss, and solder itself back together causes a massive sensory overload. For 1d6 minutes afterward, the wizard's voice echoes with a bizarre, buzzing metallic reverb, and their vision shifts entirely into an inverted thermal spectrum where cold environments look pitch black and living creatures glow like neon street signs. This provides absolutely no mechanical bonuses or penalties—it is purely a jarring, cosmic side-effect of self-inflicted phlogistonic engineering.

Spellburn Advantage: Fueling the Furnace

When a wizard utilizes spellburn to cast this spell, they are flinging their own physical cellular mass into the etheric engine as clean fuel. This raw sacrifice purifies the erratic streams of phlogiston, yielding a focused advantage to the healing outcome:

- For each point of physical ability score (Strength, Agility, or Stamina) sacrificed to fuel this cast, the wizard may **reroll a single "1"** rolled on any of the recipient's healing Hit Dice. The new result must be kept, even if it is another 1. Unused rerolls from spellburn points are lost once the healing pool is finalized.

Judge's Note: The caster achieves the specific effect matching their spell check roll. However, due to the highly malleable and custom-tailored nature of phlogistonic restructuring, the wizard may freely choose to manifest any lower success result instead of the maximum roll achieved if a less intense biological restructure is desired.

Manifestation (Roll D4)

D4	Visual Manifestation Effect
1	A stream of blinding, boiling neon-orange plasma jets from the wizard's fingertips, completely encasing the target in a crackling, fluidic cocoon of raw etheric power during reconstruction.
2	The wizard's skeletal structure glows blindingly green through their translucent flesh as an immense, concussive WHUMP sound rattles the immediate area, instantly filling the air with the sharp scent of ozone.
3	The caster violently vomits up a dense cloud of shimmering violet vapor that unceremoniously funnels down the target's throat and into their open wounds, knitting tissue from the inside out.
4	The recipient's entire body rhythmically expands and contracts like a pneumatic forge bellows, spraying harmless, static blue electrical discharge from every pore until the biological weld is completed.

Misfire (Roll D4)

D4	Misfire Result
1	The phlogiston violently leaks into the surrounding terrain! The immediate 10-foot radius centered on the caster becomes heavily slicked in an extremely slippery, iridescent, and highly flammable etheric grease (Reflex save DC 12 or fall prone; ignites instantly if exposed to fire).
2	The wizard suffers a gaseous inversion! The wizard's torso balloons up to three times its normal volume for 1 hour. They gain 30 lbs, cannot wear armor, and their movement speed is reduced by half, though they bounce around harmlessly and float slightly if dropped.
3	Thermal backdraft. Instead of injecting vital heat, the cosmic ether violently drains all thermal energy from the immediate area. Both the caster and the intended target suffer 1d4 points of cold damage as their eyebrows and eyelashes instantly frost over.
4	The erratic life-fluid leaks into an inanimate possession. A random mundane item on the wizard's person (such as a scroll tube, component pouch, or left boot) sprouts a gibbering, toothy mouth and a blinking eyeball for 24 hours, constantly screaming bizarre wizardly complaints.

Corruption (Roll D4)

D4	Corruption Result Effect
1	Minor: The caster's fingers become permanently stained a glowing, luminous neon-orange that persistently smells of caramelized sugar and sulfur, glowing softly in dark spaces.
2	Minor: The caster's blood supply becomes permanently phlogistonic. Whenever they bleed or take physical damage, their blood bubbles violently like boiling oil and emits wisps of thick, sweet white smoke.
3	Major: The caster's eyes undergo full thermal mutation, transforming into glowing, pupil-less neon-yellow orbs. This grants darkvision out to 60 feet but inflicts a permanent -2 penalty to Personality checks with standard, superstitious townsfolk.
4	Major: One of the caster's limbs becomes permanently rubbery and semi-translucent under direct sunlight, visibly revealing swirling, multi-colored currents of raw etheric power pulsing and churning beneath the skin.

Spell Check Results

Spell Check Roll	Result Effect
1	Catastrophic Collapse, Loss, Misfire & Corruption: The magic backfires exponentially. The spell is lost for the remainder of the day, and the wizard must immediately roll on both the Misfire table and the Corruption table.
2-4	Loss, Failure & Misfire: The phlogiston erupts erratically out of containment. The spell fails completely, is immediately wiped from the caster's memory for the remainder of the day, and the wizard must roll on the Misfire table.
5-7	Loss & Failure: The plasma matrix implodes and turns to slag. The spell fails completely and is lost from the caster's memory for the remainder of the day.
8-10	Simple Failure: The ether fails to ignite, venting away safely as a gentle, tepid breeze. The spell fails, but the wizard successfully maintains control of the formula and retains the spell in memory.
11-13	Mild Etheric Coaxing: The wizard introduces just enough volatile thermal phlogiston to gently excite the target's cellular matrix. Heals 1 Hit Die of hit points. The patient's skin becomes intensely hot to the touch, and they emit a heavy odor of burnt toast for 1 hour.
14-15	Energized Bio-Overnight Rest: The kinetic fluid seals minor lacerations and forces simple bone fractures back into position with a loud, sickening crunch. Heals 1 Hit Die of hit points immediately. Furthermore, the recipient's natural restorative state is vastly energized; they recover an additional 1 Hit Die of hit points during their next standard overnight rest.
16-17	Vigorous Gaseous Inflation & Cellular Purification: Primal vital fluid violently courses through the subject's circulatory system, fusing damaged muscular tissue and fully setting complex broken limbs. Heals 2 Hit Dice of hit points immediately. Simultaneously, the cascading thermal energy flushes the recipient's body, completely destroying all mundane biological diseases, infections, and rotting plagues including the total, miraculous reconstruction and healing of tooth decay, gum abscesses, and dental structural degradation. The treated limbs appear severely sunburned and emit a soft, neon-green luminescence in darkness for 24 hours.
18-19	Phlogistic Reconstitution & Day-Rest Overdrive: The boiling vital fluid fills the recipient's internal cavity, vaporizing internal hemorrhaging and cauterizing ruptured deep arteries. Heals 2 Hit Dice of hit points immediately and eliminates any blindness, deafness, or muteness resulting entirely from physical trauma. Additionally, their natural recovery systems enter overdrive: for the next 48 hours, they heal an extra 2 Hit Dice of hit points whenever they complete a full day or night of rest. The target enters a state of euphoric hysteria, laughing uncontrollably for 1d4 rounds.
20-21	Sub-Atomic Blast-Welding: A brilliant wave of crackling plasma restores the body. Heals 3 Hit Dice of hit points immediately. In addition to standard physical mending, the chaotic essence rapidly regenerates recently severed minor appendages (fingers, toes, ears, teeth) through a bubbling, translucent slime that solidifies into fresh, healthy flesh over the course of 1 minute.
22-23	Plasma-Core Overdrive: A blinding flash of pure kinetic-vital energy perfectly rebuilds entirely shattered bone structures and shredded internal organs. Heals 4 Hit Dice of hit points immediately. The target is so violently re-energized by the fluid that they receive a +2 bonus to Initiative and a +1 bonus to all attack rolls for 1 hour.
24-26	Etheric Cellular Re-Arrangement: The wizard executes architectural biological miracles. Heals 5 Hit Dice of hit points immediately. This effect can permanently reattach a completely severed limb if held firmly against the stump during casting. The target's superficial genetics get slightly scrambled, causing them to grow a thick patch of bright purple fur or shimmering reptile scales that sloughs off completely after 24 hours.

Spell Check Roll	Result Effect
27-29	Ultimate Molecular Restructuring: The phlogistonic flood entirely flushes the target's physical vessel. Heals 6 Hit Dice of hit points immediately. It completely incinerates all mundane poisons, toxins, and venomous infections, and instantly straightens and mends any withered or long-standing crippled limbs.
30-31	Hyper-Vitalization Matrix & Radiant Plasma Splash: The caster forces an absolute, overflowing density of life-essence into the subject. Heals 8 Hit Dice of hit points immediately and fully restores up to 1d4 points of physical ability score drain (Strength, Agility, or Stamina) previously suffered. Due to the over-pressurized density of the phlogiston loop, a brilliant shockwave of loose vital energy violently detonates outward from the impact point: anyone (friend or foe alike) standing within a 10-foot radius of the primary recipient is instantly caught in the raw plasma spray and recovers 2 Hit Dice of hit points as their own ambient wounds spontaneously fuse and knit.
32+	Cosmic Phlogistonic Ascension: The target is entirely atomized and reconstructed in a glorious explosion of cosmic fire. The target is instantly healed to full maximum hit points, all maimings or permanent injuries are completely erased, and their skin takes on a metallic bronze sheen that grants them immunity to critical hits and a +2 bonus to AC for the next 24 hours.

Elemental Spells

These spells are available to Wizards specializing in the Elemental School of Magic.

Level	Original Class	Spell Name	Core Page
1	Wiz	Animal summoning	129
1	Wiz	Cantrip	130

6. CHECKPOINT: APPENDIX N ARCHETYPES

To cross-examine the validity of these house rules, this section reviews iconic figures from pulp fantasy to see if they fit more cleanly within this framework than standard rules as written allow:

- **Aragorn:** Clearly demonstrates significant healing expertise, yet acts predominantly as a frontline martial asset. Because dedicated "Rangers" are not numerous enough to justify a dedicated character class, these rules model Aragorn perfectly as a **Warrior** possessing the background occupation of either Healer or Herbalist.
- **Elrond:** Revered as the premier medical specialist in Middle-earth. These house rules cleanly represent Elrond as an **Elf character** who has dedicated their arcane casting progression to the **Healing School of Magic**.
- **Elric of Melniboné:** A definitive archetype of the **Eldritch (Black Magic) Wizard**. His operational dependence on catastrophic forces and his extraplanar entity patron, Arioch, are dynamically handled using *Invoke Patron* and *Patron Bond* mechanics. His legendary vampiric runic blade, Stormbringer, is represented via the *Sword Magic* spell, which is natively accessible to the Eldritch school.
- **The Gray Mouser:** An exceptional example of a **Wizard of Enchantment (White Magic)**, modeling his innate wit, misdirection, and manipulative flair through spells designed to alter perception and mental clarity.
- **Ged (A Wizard of Earthsea):** Easily mapped as a **Wizard of Elemental Magic**, highlighting his core mastery over names and direct manipulation of physical natural balances.

7. APPENDIX: FUNNEL HOUSE RULES

These specific mechanical restrictions apply strictly to Character Funnel play sessions (Level 0 characters):

- Each participating player is dealt one randomized roster sheet containing four Level 0 characters. Players are permitted to trade character sheets freely, provided both parties are in mutual agreement.

- Players select exactly three active characters to initiate the adventure. The remaining character is designated as a "Reserve" and circled on the sheet. In the disastrous event of a Total Party Kill (TPK), the collective group is permitted a final, last-ditch attempt to complete the objective using their accumulated reserve characters.
- For all four generated characters (including the inactive reserve), players must define:
 - **Name:** Can be a simple moniker or descriptive nickname.
 - **Alignment:** Must choose between Chaotic, Neutral, or Lawful. This choice will carry definitive roleplaying and mechanical weight.
 - **Description:** Brief overview including visual styling, apparel, age, or distinctive accents.
- Players must designate one of their three active characters as the group's **Leader**, marking them with a visible star. In the event of that character's death, a surviving team member must immediately be promoted to leader and starred.
- All Level 0 characters under a player's control operate on a singular initiative profile. The player rolls initiative for their block using their current designated Leader's Initiative modifier. As a result, it is strategically advantageous to place the character with the highest reflex modifier in leadership roles.
- Combat tactics for Level 0 characters reflect their total lack of military experience—resembling five-year-olds on a soccer field. Characters move collectively as a loose clump. On spatial tactical maps, a single combined token may represent a player's complete character cluster.
- Regardless of disparate professional backgrounds or social status, all four generated characters under a player's sheet are assumed to reside together within a single shared shack.
